Low voltage

Process performance cast iron motors

400 V 50 Hz, 460 V 60 Hz

With expertise, and a comprehensive portfolio of products and life-cycle services, we help value-minded industrial customers improve their energy efficiency and productivity.

Low voltage Process performance motors

Sizes 71 to 500, 0.09 to 1300 kW

International motor efficiency standards and regulations

Since the validation of IEC 60034-30:2008 and its refined version IEC 60034-30-1:2014, a worldwide energy efficiency classification system has existed for low voltage three-phase asynchronous motors. These international standards have been created to enable and increase the level of harmonization in efficiency regulations around the world and to also cover motors for explosive atmospheres.

IEC 60034-30-1:2014 defines International Efficiency (IE) classes for single speed, three-phase, 50 Hz and 60 Hz induction motors. The efficiency levels defined in IEC 60034-30-1 are based on the test method specified in IEC 60034-2-1:2014. Both standards are part of an effort to unify motor testing procedures with CSA390-10 and IEEE 112 standards as well as efficiency and product labeling (IE) requirements to enable motor purchasers worldwide to easily recognize premium efficiency products.

To promote transparency in the market, IEC 60034-30-1 states that both the efficiency class and efficiency value must be shown on the motor rating plate and in product documentation. The documentation must clearly indicate the efficiency testing method used as different methods can produce differing results.

Minimum energy performance standards

While the IEC as an international standardization organization sets guidelines for motor testing and efficiency classes, the organization does not regulate efficiency levels in countries. The biggest drivers for mandatory Minimum Energy Performance Standard (MEPS) levels for electric motors are global climate change, government targets to curb CO₂ emissions and rising electricity demand, especially in developing countries. The whole value chain, from manufacturer up to end user, must be aware of the legislation in order to meet local requirements, to save energy and reduce the carbon footprint.

Harmonized global standards and the increasing adoption of MEPS around the world are good news for all of us. However, it is important to remember that harmonization is an ongoing process. Even though MEPS are already in effect in several regions and countries, they are evolving and differ in terms of scope and requirements. At the same time, more countries are planning to adopt their own MEPS regulations. A view of existing and coming MEPS regulations in the world can be seen on the World map above.

IEC 60034-30-1:2014

This standard defines four International Efficiency (IE) classes for single speed electric motors that are rated according to IEC 60034-1 or IEC 60079-0 (explosive atmospheres) and designed for operation on sinusoidal voltage.

- IE4 = Super premium efficiency
- IE3 = Premium efficiency, identical to the table in 10CFR431 ('NEMA Premium') in the USA and CSA C390-10:2015 for 60 Hz
- IE2 = High efficiency
- IE1 = Standard efficiency

IEC 60034-30-1 covers the power range from 0.12 kW up to 1000 kW. Most of the different technical constructions of electric motors are covered as long as they are rated for direct on-line operation. The coverage of the standard includes:

- Single speed electric motors (single and three-phase), 50 and 60 Hz
- 2, 4, 6 and 8 poles
- Rated output P_N from 0.12 kW to 1000 kW
- Rated voltage U_N above 50 V up to 1 kV
- Motors capable of continuous operation at their rated power with a temperature rise within the specified insulation temperature class
- Motors, marked with any ambient temperature within the range of -20 °C to $+60\text{ °C}$
- Motors, marked with an altitude up to 4000 m above sea level

By comparing IEC 60034-30-1 to CSA C390-10:2015 and "10CFR431 Subpart B – Electric motors", it can be seen that the efficiency limits and tables are well aligned and their major difference is in the scope of the output power where CSA and 10CFR431 have a maximum power of 500 hp. There are also some minor differences in the scope of excluded motors.

Note: CFR is Code of Federal Regulations.

The following motors are excluded from IEC 60034-30-1:

- Single-speed motors with 10 or more poles or multi-speed motors
- Motors completely integrated into a machine (for example pump, fan or compressor) that cannot be tested separately from the machine
- Brake motors, when the brake cannot be dismantled or separately fed

01

ABB and efficiency standards

ABB determines efficiency values according to IEC 60034-2-1 using the low uncertainty method (i.e. summation of losses), with additional load losses determined by the method of residual loss.

It is good to mention and emphasize that the IEC 60034-2-1 test method, which is known as an indirect method, is technically equivalent to the test methods in the standards CSA 390-10 and IEEE 112 Method B leading to the equivalent losses and thus efficiency values. Both test methods can be used by ABB and shall be used for both Canada and the US where IEC 60034-2-1 is not recognized yet.

As the world market leader, ABB offers the largest range of LV motors available. It has long advocated the need for efficiency in motors, and high efficiency products have formed the core of its portfolio for many years. The core of ABB's Process performance range is based on a full range of IE2 and IE3 motors - with many available from stock. We also supply IE4 motors for additional energy savings.

Nominal efficiency limits defined in IEC 60034-30-1:2014 (reference values at 50 Hz, based on test methods specified in IEC 60034-2-1:2014).

Output	IE1Standard efficiency				IE2High efficiency				IE3 Premium efficiency				IE4 Super Premium efficiency

Note: If the motor is mounted shaft upwards, take measures to prevent water or any other liquid from running down the shaft into the motor.

Cooling

Designation system concerning methods of cooling refers to standard IEC 60034-6.

Explanation of the product code

International Cooling	Circuit arrangement	Primary coolant	Method of movement of primary coolant	Secondary coolant	Method of movement of secondary coolant
IC	4	(A)	1	(A)	6
	1	2	3	4	5

Position 1	
0:	Free circulation (open circuit)
4:	Free circulation (open circuit)
Position 2	
A:	For air (omitted for simplified designation)
Position 3	
0:	Free convection
1:	Self-circulation
6:	Machine-mounted independent component
Position 4	
A:	For air (omitted for simplified designation)
W:	For water
Position 5	
0:	Free convection
1:	Self-circulation
6:	Machine-mounted independent component
8:	Relative displacement

Degrees of protection: IP code/IK code

Classification of degrees of protection provided by enclosures of rotating machines are refers to:

- Standard IEC 60034-5 or EN 60529 for IP code
- Standard EN 50102 for IK code

IP protection

Protection of persons against getting in contact with (or approaching) live parts and against contact with moving parts inside the enclosure. Also protection of the machine against ingress of solid foreign objects. Protection of machines against the harmful effects due to the ingress of water.

Explanation of the IP code

Ingress protection	Degree of protection to persons and to parts of the motors inside the enclosure	Degree of protection provided by the enclosure with respect to harmful effects due to ingress of water
IP	5	5
	1	2

Position 1

2:	Motors protected against solid objects greater than 12 mm
4:	Motors protected against solid objects greater than 1 mm
5:	Dust-protected motors
6:	Dust-tight motors

Position 2

3:	Motors protected against spraying water
4:	Motors protected against splashing water
5:	Motors protected against water jets
6:	Motors protected against heavy seas

IK code

Classification of degrees of protection provided by enclosure for motors against external mechanical impacts.

Explanation of the IK code

International mechanical protection	Characteristic group
IK	08
	1

Position 1

Relation between IK code and impact energy:

IK code	Impact energy/Joule
0:	Not protected according to EN 50102
01:	0.15
02:	0.2
03:	0.35
04:	0.5
05:	0.7
06:	1
07:	2
08:	5 (ABB Standard)
09:	10
10:	20

Insulation

—
01 Safety margins per
thermal class

ABB uses class F insulation, which, with temperature rise B, is the most common requirement among industry today.

The use of class F insulation with class B temperature rise gives ABB products a 25 °C safety margin. This can be used to increase the loading for limited periods, to operate at higher ambient temperatures or altitudes, or with greater voltage and frequency tolerances. It can also be used to extend insulation. For instance, a 10 K temperature reduction will extend the insulation life.

Thermal class 130 (B)

- Nominal ambient temperature 40 °C
- Max permissible temperature rise 80 K
- Hot spot temperature margin 10 K

Thermal class 155 (F)

- Nominal ambient temperature 40 °C
- Max permissible temperature rise 105 K
- Hot spot temperature margin 10 K

Thermal class 180 (H)

- Nominal ambient temperature 40 °C
- Max permissible temperature rise 125 K
- Hot spot temperature margin 15 K

—
01

Voltage and frequency

01 Voltage and frequency deviation in zones A and B

The impact on temperature rise caused by voltage and frequency fluctuation is defined in IEC 60034-1. The standard divides the combinations into two zones, A and B. Zone A is the combination of voltage deviation of $\pm 5\%$ and frequency deviation of $\pm 2\%$. Zone B is the combination of voltage deviation of $\pm 10\%$ and frequency deviation of $\pm 3\%$. This is illustrated in figure below.

Motors are capable of supplying the rated torque in both zones A and B, but the temperature rise will be higher than at rated voltage and frequency. Motors can be run in zone B only for a short period of time.

01

Key

X axis	frequency p.u.
Y axis	voltage p.u.
1	zone A
2	zone B (outside zone A)
3	rating point

Surface treatment

The standard surface treatment of the Process performance motors is designed to meet corrosivity category C3, both outdoors and indoors. This also meets the requirements in C1 and C2.

The corrosivity categories are defined in standard ISO12944-2.

Special surface treatments for other corrosivity categories as well as offshore environments are available as options.

The standard ABB paint color for motors is Munsell blue 8B 4.5/3.25, except for special systems such as NORSOK where a specific color is requested.

Atmospheric-corrosivity categories and examples of typical environments

Corrosivity category	Examples of typical environments (informative only)	
	Exterior	Interior
C1	-	Heated buildings with clean atmospheres, e.g., offices, shops, schools, hotels
C2	Atmospheres with low levels of pollution: mostly rural areas	Unheated buildings where condensation can occur, e.g., depots, sports halls
C3	Urban and industrial atmospheres, moderate sulfur dioxide pollution; coastal areas with low salinity	Production rooms with high humidity and some air pollution, e.g., food-processing plants, laundries, breweries, dairies
C4	Industrial areas and coastal areas with moderate salinity	Chemical plants, swimming pools, coastal ship- and boatyards
C5	Industrial areas with high humidity and an aggressive atmosphere, and coastal areas with high salinity	Buildings or areas with almost permanent condensation and with high pollution
CX	Offshore areas with high salinity, and industrial areas with extreme humidity and an aggressive atmosphere, and sub-tropical and tropical atmospheres	Industrial areas with extreme humidity and an aggressive atmosphere

Variable speed drives with Process performance motors

—
01 Isotherm loadability curves for motors with 50Hz nominal frequency

Variable speed drives (VSD) provide significant benefits when used together with ABB Process performance motors. The advantages include better process control and energy savings through a regulation of motor speed, and smooth starting with a reduced inrush current, reducing the stress on the equipment and supply network.

By choosing an ABB motor–drive package, users can be confident that the motor and drive combination is optimized for their application; it is a working package with a known performance.

Process performance motors are designed for both direct on line (DOL) and variable speed operation, and will, either as standard or by adding a few extras, be suitable for variable speed operations.

When selecting process performance motors for VSDs, the following points must be taken into consideration. The DriveSize selection tool helps in selecting the optimal combination of motor, drive and supply transformer.

Motor loadability with variable speed drives

The difference in the temperature rise of a motor run direct on line compared to the same motor run with a drive is influenced by factors such as the cooling effect of a shaft-mounted fan, depending on the speed of the motor, increased losses due to harmonics generated by the drive and reduced flux above the field weakening point. The effects of all these factors are combined in the loadability curves.

The isotherm loadability curves in Figure 01 show the maximum continuous load torque as a function of frequency (speed), which results in the same temperature rise as an operation with the rated sinusoidal supply at a nominal frequency and full rated load. These curves are based on measurements with ABB ACS880 drives.

The motor's maximum continuous loadability depends on the motor's actual temperature rise and the desired or allowed maximum temperature rise, typically class B or class F. Use the DriveSize dimensioning tool to choose the right motor and drive for your application. In DriveSize, you can specify the desired temperature rise and the tool scales the loadability curve according to the actual motor temperature rise.

If the motor is loaded according to the temperature rise F, it will be necessary to check the temperature rise in other parts of the motor and ensure that the lubrication intervals and grease type are still appropriate.

Many applications also demand short time overloadability. In the DriveSize tool, you can also specify short time overload needs and the tool will choose the right products for your task.

01

Operating speed

Process performance motors are designed to work over a wide speed range and also at speeds significantly higher than nominal. The maximum speeds can be found on motor rating plates or in DriveSize. In addition to the motor speed, make sure that the maximum or critical speed of the entire application is not exceeded.

—
02 Maximum allowed phase-to-phase voltage peaks at motor terminals, as a function pulse rise time

Ventilation

When the motor is operating at low speeds, the cooling capacity of the fan decreases, which again reduces the motor's load capacity. A separate, constant-speed fan (variant codes 183, 422, 514) can be used to increase the cooling capacity at low speed, if required for loads with constant torque characteristics.

Lubrication

The lubrication interval of regreasable bearings depends on the running speed of the motor and the bearing temperature. Motors in frame size 280 and larger are delivered as standard with a lubrication plate in tabular format that states the relubrication intervals at different speeds and temperatures. A similar plate is optional for sizes 160–250 and can be ordered by using the variant code 795. Smaller motors usually have greased, sealed-for-life bearings. Please refer to the installation, operation and safety manual for further information on lubrication.

Winding insulation

To ensure that motors operate reliably, the effects of non-sinusoidal output voltages from the converter must be taken into consideration when selecting the correct insulation system for the motor and output filters for the drive. The insulation and filters must be selected according to the table below.

Guideline maximum voltage values for Process performance motors.

Winding insulation and filters required

$U_N \leq 500$ V	Standard insulation
$U_N \leq 600$ V	Standard insulation + dU/dt filters OR Special insulation (variant code 405)
$U_N \leq 690$ V	Special insulation (variant code 405) AND dU/dt-filters at converter output
$600 \text{ V} < U_N \leq 690 \text{ V}$ cable length > 150 m	Special insulation (variant code 405)

For more information on dU/dt filters, see the relevant ABB drives documents.

For other drives and cases where the guidelines shown in table above cannot be applied, the selection must be based on the voltages present at the motor terminals.

Allowed phase-to-ground voltage peaks at motor terminals:

- 1,300 V peak: standard insulation
- 1,800 V peak: special insulation, variant code 405

The maximum allowed phase-to-phase voltage peaks at the motor terminals as a function of the pulse rise time are shown in Figure 02. The higher curve (special insulation) applies to motors with special winding insulation for a variable speed drive supply (variant code 405). Standard insulation applies to motors with a standard design.

02

Bearing currents

Bearing voltages and currents must be avoided in all motors to ensure reliable operation of the entire application. Table 2 below gives the selection rules, depending on motor output power and frame size, when used together with ABB drive products; the same rules can also be applied as guidance when using ABB Process performance motors with other manufacturers' drives.

Precautionary measures to avoid bearing currents in variable speed drives.

Nominal power (P_N and / or Frame size (IEC))	Precautionary measures
$P_N < 100$ kW	No action needed
$P_N \geq 100$ kW OR IEC 315 $\leq$ Frame size $\leq$ IEC 355	Insulated non-drive end bearing
$P_N \geq 350$ kW OR IEC 400 $\leq$ Frame size $\leq$ IEC 500	Insulated non-drive end bearing AND Common mode filter at the converter

Common mode filters

Common mode filters are installed at the output of the variable speed drive. These filters reduce common mode currents and, thus, decrease the risk of bearing currents. Common mode filters do not significantly affect the phase of main voltages on motor terminals. For more information, see the ABB drives documents.

Insulated bearings

ABB uses bearings with an insulated outer race or hybrid bearings with ceramic rolling elements.

Insulated bearings at the non-drive end should be selected as indicated in . This solution can be ordered by using variant code 701.

Earthing and cabling

For motors with a nominal power above 30 kW, cables with a symmetrical concentric protective earth should be used across the system. The same type of cables are also recommended for motors with an output of 30 kW and below.

Solutions for persistent bearing currents

In exceedingly rare cases, bearing currents might still exist even if the measures specified above have been taken. For such installations, there are two advanced methods that would provide a remedy: either a shaft grounding bush, or insulated bearings at both ends.

The shaft grounding bush is installed inside the motor to protect it from the environment and ensure good grounding of the shaft. The shaft grounding brush can be ordered by using variant code 588.

The second advanced solution is to mount insulated bearings at both ends. These can either be bearings with an insulated outer cage, or hybrid bearings with ceramic rolling elements. Insulated bearings at both ends can be ordered by using variant code 702. Note that this variant cannot be combined with special drive-end bearing solutions, such as roller bearings or angular contact ball bearings.

Electromagnetic compatibility (EMC)

The high-frequency components in a variable speed drive might cause electromagnetic interference with other equipment in the installation. To avoid this, certain measures should be taken. To meet EMC requirements, special EMC cable glands with a 360° connection to the concentric protective earth conductor should be used. Such cable glands can be used with variant code 704.

Generation code

A, B, C...G...K: The product code must be, if needed, followed by variant codes.

Efficiency values are given according to IEC 60034-2-1; 2014.

For detailed dimension drawings please see our web-pages www.abb.com/motors&generators or contact ABB.

Rating plates

01 Rating plate example, motor size 100, IE2.

02 Rating plate example, motor size 160, K generation, IE3.

03 Rating plate example, motor size 315, IE4.

The motor's main rating plate shows the motor's performance values with various connections at nominal speed. The rating plate also shows the efficiency level (IE2, IE3, or IE4), year of manufacture, and the lowest nominal efficiency at 100, 75, and 50 % nominal load.

The plate samples shown on this page present typical data rows. The actual content of the plate may vary according to your order and according to the motor's IE class.

Technical data

IE2 cast iron motors 400 V 50 Hz

IP 55 - IC 411 - Insulation class F, temperature rise class B
IE2 efficiency class according to IEC 60034-30-1; 2014

Output kW	Motor type	Product code	Speed r/min	Efficiency IEC 60034-30-1: 2014				Current		Torque		Moment of inertia J = 1/4 GD ₂ kgm ₂	Weight kg	Sound pressure Level L _{PA} dB	
				Full load 100%	3/4 load 75%	1/2 load 50%	Power factor Cos φ	I _N A	I _S /I _N	T _N Nm	T _L /T _N				T _B /T _N

¹⁾ -3dB(A) sound pressure level reduction with unidirectional fan construction. Direction of rotation must be stated when ordering, see variant codes 044 and 045.

²⁾ Unidirectional fan construction as standard. Direction of rotation must be stated when ordering, see variant codes 044 and 045.

³⁾ Temperature rise class F

⁴⁾ Only available network voltage 690 VD

Variant codes

Variant codes specify additional options and features to the standard motor. The desired features are listed as three-digit variant codes in the motor order. Note also that there are variants that cannot be used together

Most variant codes apply to IE2, IE3, and IE4 motors. For confirmation of availability of the variants, please refer to the VnP application or consult with your ABB sales office before placing an order.

Mechanical design

Motor frame and drain holes

—
01 As standard, motor sizes 71 - 450 are delivered with drain holes and closable plugs.

Motor frame

The motor frame, end shields and main terminal box are made of cast iron. Feet are integrated with the frame, except for sizes 160-250 with side mounted terminal box, which have detachable feet.

Motors can be supplied for foot mounting, flange mounting, and combinations of these.

Drain holes

Motors are provided with drain holes fitted with closable plugs as standard. The plugs are made of plastic material and are delivered in open position.

When mounting arrangement differs from foot mounted IM B3, mention variant code 066 when ordering to ensure the drain plug is mounted in the lowest position.

—
01

Lifting lugs

The motors are provided as standard with lifting lugs according to the table below. For improved lifting possibilities can variant code 305 be added, please refer to the variant code section for information about availability.

Frame size	Type of lugs	Foot mounted motors	Flange mounted motors
71, 80	No lugs, weight of motors is less than 25 kg	–	–
90–132	Detachable eye bolt	2 pcs on top of motor diagonally placed, size M8	2 pcs on top of motor diagonally placed, size M8
160–200	Integrated in casting / detachable eye bolt	2 pcs on top of motor diagonally placed, integrated in frame casting	Locations for eye bolts: 4 pcs at N-end and 4 pcs at D-end. 2 pcs eye bolts size M12 delivered with each motor
225–250	Integrated in casting / detachable eye bolt	2 pcs on top of motor diagonally placed, integrated in frame casting	Locations for eye bolts: 4 pcs at N-end and 4 pcs at D-end. 2 pcs eye bolts size M16 delivered with each motor
280, 315	Detachable eye bolt	1 pcs close to terminal box on top, size M24	Locations for eye bolts: 4 pcs at N-end and 4 pcs at D-end, one location on top close to terminal box. 2 pcs eye bolts size M24 delivered with each motor
355	Detachable eye bolt	1 pcs close to terminal box on top, size M30	Locations for eye bolts: 4 pcs at N-end and 4 pcs at D-end, one location on top close to terminal box. 2 pcs eye bolts size M30 delivered with each motor
400	Detachable eye bolt	1 pcs close to terminal box on top, size M36	Locations for eye bolts: 4 pcs at N-end and 4 pcs at D-end, one location on top close to terminal box. 2 pcs eye bolts size M36 delivered with each motor
450	Detachable eye bolt	Locations for eye bolts: 4 pcs at N-end and 4 pcs at D-end, one location on top close to terminal box. 3 pcs eye bolts size M42 delivered with each motor	Locations for eye bolts: 4 pcs at N-end and 4 pcs at D-end, one location on top close to terminal box. 2 pcs eye bolts size M42 delivered with each motor
500	Detachable eye bolt	Locations for eye bolts: 1 pcs close to terminal box on top, size M48	Locations for eye bolts: 4 pcs at N-end and 4 pcs at D-end, one location on top close to terminal box. 2 pcs eye bolts size M48 delivered with each motor

Mechanical design

Heating elements

Heating elements are installed into windings to keep them free of corrosion in humid conditions. The required power of heating elements is shown in the table. You can order heating elements with variant code 450 or 451.

Motor size	71	80	90	100	112	132	160	180
Power (W)	25	25	25	25	25	25	25	25

Power (W)	25	60	60	60	2x60	2x60	2x60	2x100	2x100

○ = Included as standard | ● = Available as option | - = Not applicable

Mechanical design

Bearings

Process performance motors are normally fitted with single-row deep-groove ball bearings, as shown in the table below.

If the bearing at the D-end is replaced with a roller bearing (NU- or NJ-), higher radial forces can be handled. Roller bearings are suitable for belt-drive applications and can be ordered with variant code 037.

When high axial forces are involved, angular-contact ball bearings should be used. When ordering a motor with an angular-contact ball bearing, also specify the method of mounting and the direction and magnitude of axial force to ensure that the optimal bearing system design is selected.

The variant codes for ordering angular-contact ball bearings at D-end are 058 and 060.

Standard and alternative designs

Shaft height	Product design code	Pole number	Standard design		Alternative designs	
			Deep groove ball bearings		Roller bearings (037)	
			Drive end	Non-drive end	Drive end	Angular contact ball bearings (058, 060)

Bearing life

The nominal life L_{10h} of a bearing is defined according to ISO 281 as the number of operating hours achieved or exceeded by 90 % of identical bearings in a large test series under specified conditions. 50 % of bearings achieve at least five times this lifetime.

The calculated bearing life L_{10h} for power transmission by means of coupling is for horizontally mounted motors in sizes up to 315 $\geq 100,000$ hours.

Lubrication

On delivery, motors in frame size 160 and above are prelubricated with high-quality grease. Before the first start-up, read the instructions for relubrication and recommended grease in the Manual for low voltage motors delivered together with the motor, or see the lubrication plate on the motor.

Motors with bearings greased for life

Motors in frame sizes 71–132 are equipped with bearings greased for life, while this is also available as an option for frame sizes 160–250. Bearings are lubricated with high-quality, high-temperature grease. Bearing types are stated on the rating plate.

The approximate lifetime of bearings in four-pole motors is about 40 000 duty hours. Lifetime is subject to the load conditions of the application run by the motor.

Motors with relubrication nipples

In frame sizes 160–500, the bearing system is provided with valve discs to ease lubrication. Motors are lubricated while running.

The grease outlet opening has closing valves at both ends. These should be opened before greasing and closed 1–2 hours after regreasing. This ensures that the construction is tight and bearings remain dust- and dirt-free.

A grease-collection method can be used optionally.

The following tables show lubrication intervals according to the L1 principle for various nominal speeds at a 25°C ambient temperature. These values apply to horizontally mounted motors (B3) with an 80°C bearing temperature and high-quality grease containing lithium-complex soap and mineral or PAO-oil.

Lubrication intervals in duty hours for ball bearings

Frame size	Amount of grease g/bearing	Amount of grease g/N-end	Output kW	Speed 3600 r/min	Speed 3000 r/min	Output kW	Speed 1800 r/min	Speed 1500 r/min	Output kW	Speed 1000 r/min	Output kW	Speed 500-900 r/min

Axially-locked bearings

All motors with deep groove ball bearings are equipped with an axially locked bearing at the D-end, as a standard feature.

Transport locking

Motors with roller bearings or an angular-contact ball bearing are fitted with a transport lock before dispatch to prevent damage to the bearings during transport. A warning sign is attached to motors when transport locking is used.

Locking may also be fitted in other cases if severe transport conditions are expected.

Mechanical design

Radial forces

The following table shows permissible radial forces on the shaft in Newtons, assuming zero axial force, a 25 °C ambient temperature, and normal conditions. The values are given for a calculated bearing life of 20 000 and 40 000 hours per motor size.

These calculated values further assume mounting position IM B3 (foot-mounted), with force directed sideways. In some cases, the strength of the shaft affects permissible forces.

Permissible loads of simultaneous radial and axial forces can be supplied on request.

If the radial force is applied between points X0 and Xmax, the permissible force FR can be calculated with the following formula:

$$F_R = F_{X0} - \frac{X}{E} (F_{X0} - F_{Xmax})$$

Where

E length of the shaft extension in the standard version

Permissible radial forces

Mechanical design

Axial forces

The following tables present permissible axial forces on the shaft in Newtons, assuming zero radial force, a 25 °C ambient temperature, and normal conditions. The values are given for a calculated bearing life of 20,000 and 40,000 hours per motor size.

At 60 Hz, the values must be reduced by 10 percent, and for two-speed motors, the higher speed determines permissible axial force. Permissible loads of simultaneous radial and axial forces can be supplied on request.

For axial force F_{AD} , it is assumed that the D-bearing is locked with a locking ring.

Permissible axial forces

Motor size	Poles	Length of shaft extension	Mounting arrangement IM B3				Mounting arrangement IM V1			
			20,000 h		40,000 h		20,000 h		40,000 h

¹⁾ On request

Terminal box

Standard terminal box

Degree of protection and mounting options

The degree of protection for the standard terminal box is IP 55. By default, terminal boxes are mounted on top of the motor at the D-end. In motor sizes 71–132, the terminal box is integrated in the motor frame. On request, the terminal box can also be mounted on the left or right side regardless of the motor size (see Mounting options).

Turnability

The standard terminal boxes for motor sizes 160–315 can be turned 4*90°, and in sizes 355–500, 2*180° after delivery. For sizes 355–500, it is also possible to mount a terminal box with an opening towards the D or N-end, using the relevant variant codes when ordering, this is needed to get the terminal block turned in the right position. For motors in size 71–132, a 4*90° turnable terminal box is optional- this can be ordered with variant code 400.

Cable entries

The terminal box is provided with tapped holes for cable glands. No cable glands are included as standard, the entry holes are closed with blanking plugs made of plastic. Very large motors have an angle adapter between the terminal box and the cable gland. Please refer to the table on the next page for further information about the amount and size of threaded holes, plugs and cable sealing units provided as standard.

Different types of cable glands are available as an option. Please refer to the terminal box alternatives section for more details.

Cable type and terminations If no cable type is specified in the order, it will be a PVC-insulated non-armored cable, and its termination parts are determined as shown in the following table.

Terminations are suitable for copper and aluminum cables. Cables are connected to terminals by cable lugs, which are not included in the delivery.

Ordering

To ensure the delivery of desired terminations for the motor, state the cable type, quantity, size, and outer diameter when ordering. Non-standard designs of terminal boxes, such as non-standard size or higher degree of protection, are available as options.

See section Variant codes for all available options.

Standard delivery

Standard delivery if no other information is provided.

Terminal box

Terminal box dimensions

01 Terminal box type 63 and 160.

02 Terminal box types 210 and 370.

03 Terminal box type 750 + adapter.

04 Terminal box type 1200 + adapter.

For motor sizes 71–132 the terminal box is integrated in motor frame and the dimensions for terminal boxes can be found in the motor dimension drawings in ABB Library.

To match the correct terminal box with motor sizes 160–500, find the motor type and correspondent terminal box type on the previous page. The box types and their dimensions are presented on this page.

Note! The C flange is different depending on frame size

Terminal box

Cable glands

The motors are delivered as standard with plugged cable entries or cable sealing units as described in the previous section. There is available a broad selection of different type of cable glands, which are suitable for different types of cable and outer diameter ranges.

Size of threaded opening for cable gland	Cable gland(s) nickel plated brass, variant code 230 or 731	EMC Cable gland(s) nickelplated brass, variant code 704	Cable gland(s) plastic, variant code 375 or 376
	Cable outer diameter, mm	Cable outer diameter, mm	Cable outer diameter, mm
M16 x 1.5	4–12	4–8	4–12
M20 x 1.5	4–12	4–12	4–12
M25 x 1.5	10–18	10–18	10–18
M32 x 1.5	14–24	14–24	14–24
M40 x 1.5	22–32	22–32	22–32
M50 x 1.5	26–35	26–35	26–35
M63 x 1.5 ¹⁾	35–45	35–45	35–45
M75 x 1.5	46–62	46–62	not available

Threaded openings for cable glands with NPT thread (variant code 730)

The standard delivery for the motors are provided with openings for cable glands with metric threads as listed in the section describing the standard terminal box. If NPT threads will be needed, the variant code 730 is to be ordered. Please check the variant code description for more information.

Motor frame size	Cable entries for auxiliaries	NPT plug
80–112	2 x 3/4"	2 x 3/4"
132	1 x 3/4"	1 x 3/4"
160–500	2 x 3/4"	2 x 3/4"

Gland plates with threaded openings for cable glands of nonstandard size

If the standard size of threaded openings for cable glands is not suitable then nonstandard size openings are also available, either by fitting the reducers to make the openings smaller or by increasing the amount or size of holes. The maximum possible size and amount for each gland plate size is listed below. Threaded openings of non-standard size can be ordered by using variant codes 554 and 727.

Gland plate size	Maximum amount and size of threaded holes
B	2 x M40
C	2 x M63
D	2 x M90 or 3 x M75
E	2 x M90 or 4 x M75

Terminal box

Terminal box alternatives

01 Main terminal box.

02 Adapters, Flange with glands; cable sealing end units.

01

Adapters

There is a broad selection of cable termination accessories available to allow termination of one or several cables. The most common ones are explained below.

How to order

- Check first that the teminal box itself allows mounting of the desired cable and cores (refer to motor type and terminal box type cross reference on previous page)
- If very large cables are used it might be necessary to use a larger terminal box than standard. Select the right cable gland(s) or cable sealing end unit(s) that match outer diameter of the cable(s)
- Select appropriate adapter or flange
- Note that turning the terminal box to a non-standard position might limit the use of some adapters.

Ordering example

Motor Cables	200 kW, 4 pole, 400 V 50 Hz 2 pieces, outer diameter 58 mm, single core cross section 185 mm², clamping device needed, cables coming from below
200 kW, 4 pole, 400 V 50 Hz 2 pieces, outer diameter 58 mm, single core cross section 185 mm², clamping device needed, cables coming from below	
Motor	M3BP 315 MLA 4-pole, B3
Adapter	D-D - variant code 293
Cable sealing end unit	Variant code 278
Clamping	Variant code 231
Auxiliaries	Variant codes 380, 567, 568

02

Main terminal box and maximum single core cross-section

You can select one size larger than standard terminal box if a larger single cross-section is needed. The standard sizes of the main terminal box are listed in the following table. The terminal box is named according to its current-carrying capacity, from 120 to 1200. Check also the capacity of the cable entry to make sure that the cables fit. A larger terminal box can be ordered with variant code 019.

Standard terminal box	Large terminal box	Size of opening, large box	Max single cross-section mm² /phase
120	210	B	1 x 70
210	370	C	2 x 240
370	750	D	2 x 300
750	1200	E	4 x 500
1200	–	–	–

Optional adapters

To allow easy termination of cables entering the terminal box from above or below, an angle adapter is recommended. These are available for motor sizes 280 and above and can also be used to allow the mounting of several cable sealing end units or gland plates. For exact suitability on a certain motor size, refer to the 'terminal box opening' column in section Standard terminal box.

Adapater						
Variant code	292	293	294	295	296	444
Opening to terminal box	C	D	E	E	E	E
Flange or opening for end unit	C	D	D	2 x D	3 x D	2 x E
Material	Cast iron	Cast iron	Cast iron	Steel	Steel	Steel
Notes				Included as standard delivery for some types. Please check the table on page 68 for more information.	Only possible on type 1200 terminal box.	Only possible on type 1200 terminal box.

Cable sealing end units

As an alternative to flanges and cable glands, cable sealing end units can be used. These allow more space for spreading the cores for easy termination.

Cable sealing end units have rubber-sealed entries for one of two main cables. In addition, there are two plugged M20 holes for auxiliary cables.

Please note that the table below is only for guidance. Due to the large amount of combinations possible between terminal box sizes, end units and adapters, not all possible combinations can be described. Please contact your ABB sales office for more detailed information.

	Small	Medium	Large
End unit

Cable entry for auxiliary cable	2 x M20 plugged holes	2 x M20 plugged holes	2 x M20 plugged holes
Additional optional variants	EMC cable gland (704)	EMC cable gland (704)	EMC cable gland (704)

Auxiliary terminal box

You can equip motors from frame size 160 upward with one or several auxiliary terminal boxes for connection of auxiliaries like heaters or temperature detectors. The standard auxiliary terminal box material for motor sizes 280–500 is aluminum and for 160–250 cast iron. For 280–500, cast iron as box material is also available as an option.

Connection terminals are of spring-loaded type for quick and easy connection. These are suitable for up to 2.5 mm² wires. Auxiliary terminal boxes for 280–500 are equipped with an earthing terminal. The first auxiliary terminal box is located on the right-hand side at D-end as standard.

The standard cable entry size is M20 for the aluminum box and M16 for the cast iron box, and the number of entries depends on the terminal box type and the number of selected auxiliaries.

Related variant codes

380	Separate terminal box for temperature detectors, standard material
418	Separate terminal box for auxiliaries, standard material
567	Separate terminal box material: cast iron
568	Separate terminal box for heating elements, standard material
569	Separate terminal box for brake

Small auxiliary aluminum terminal box for motor sizes 280–500 (variant codes 418, 568, 380, 569). The size of terminal box ordered with these codes depends on the number of accessories ordered. 80 x 125 mm, max 12 strips. Earthing size M4.

Large auxiliary aluminum terminal box for motor sizes 280–500. The size of terminal box ordered with these codes depends on the number of accessories ordered. 80 x 250 mm, max 30 strips. Earthing size M4.

Auxiliary cast iron terminal box Frame size for motor sizes 160–250 (variant code 418): 111 x 162 mm, max. 18 strips. No earthing.

Frame size for motor sizes 280–500 (variant code 567): 208 x 180 mm, max 30 strips. Earthing size M6.

Small auxiliary aluminum terminal box for motor sizes 71–132 (variant code: 418) 80 x 75 mm, max 8 strips. Earthing size M4.

Accessories

Built-in brake (variant code 412)

Brake design

Electromagnetic disc brakes are applied by the action of a set of springs and are released when voltage is applied to the brake coil.

This means that the motor will brake automatically in case of any voltage failure, as significant safety feature. The brake is always functional, irrespective of the mounting position of the brake motor.

Detailed view

- 1 Connection box, (with rectifier, optional)
- 2 Manual release (optional)
- 3 Modified N-end shield
- 4 V-ring seal
- 5 Adapter flange for brake
- 6 Brake
- 7 V-ring seal
- 8 Fan cover
- 9 Fan

Brake disc

The brake linings are made of asbestos-free material. The linings are highly resistant to wear and have excellent thermal conductivity, providing consistent performance also in high temperatures.

The brake disc withstands a large number of braking instances and is insensitive to dust and moisture.

Note that changing from a used to a new disc will result in a different braking torque.

Replacing the brake disc

The brake disc must be replaced when the minimum permissible lining thickness has been reached. For minimum lining thickness, refer to the brake manufacturer's catalog.

Rectifier

Rectifier is a device for DC brake applications. It is highly resistant to temperature changes as well as to voltage peaks and has additional protection for the auxiliary contact of the contactor. Thanks to its compact design, it can be placed inside the motor's terminal box. Rectifier is an optional element.

Torque adjustment

Reducing the torque of the brake is possible with most brake types. Refer to the brake manufacturer's catalog or contact ABB for more information.

Manual release

Manual release bolts are provided as standard. A manual release handle is an optional element. Manual release overrides the action of brake springs as long as it is applied.

Though the manual release handle is optionally available for all motor sizes, it cannot be used in combination with the Pintsch Bamag brake type SFB.

Brake rating plates

The brake comes with two rating plates, one attached to the brake itself and another delivered loose, together with the motor. Variant code 412 is marked on the motor's rating plate (if it is listed among the five first codes on the motor order).

01 Foot-mounted: IM B3 (IM1001), IM B6 (IM 1051), IM B7 (IM1061), IM B8 (IM 1071), IM V5 (IM 1011), IM V6 (IM 1031).

02 Flange-mounted: IM B5 (IM 3001), IM V1 (IM 3011), IM V3 (IM 3031), IM B14 (IM 3601), IM V18 (IM 3611), IM V19 (IM 3631).

03 Foot- and flange-mounted: IM B35 (IM 2001), IM V15 (IM 2011), IM V36 (IM 2031).

Available brake types

Motors can be fitted with recommended brakes from either Pintsch Bamag or Stromag, as seen in the tables below. Other brakes can be provided on request.

Pintsch & Bamag, type KFB, IP 67, 110 V DC Electromagnetic Double-Disc Spring-Applied Brake

Brake type	Brake torque Nm	For motor size
KFB 10	100	160
KFB 16	160	160–180
KFB 25	250	180–225
KFB 40	400	200–250
KFB 63	630	225–280
KFB 1000	1000	280–315
KFB 1600	1600	315–355
On request		355–450

Pintsch & Bamag, type SFB, IP 67, 110 V DC Electromagnetic Double-Disc Spring-Applied Brake

Brake type	Brake torque Nm	For motor size
SFB 16	160	200–225

NFF 40	400	200–250
NFF 63	630	225–250
For sizes 280–450 on request		

Options for the brake

On new manufacture only:

- Hand release (not possible for Pintsch Bamag brake type SFB)
- Rectifier
- Micro switch
- Proximity switch (not possible for Stromag brake)
- Standstill heater

On request:

- Special brake voltage
- Raised brake torque
- Combination with brake, separate cooling fan and/or tachometer
- For other variants, please contact ABB

Motor sizes 280 to 450 on request. Other dimensions same as Process performance cast iron motors sizes 180 to 250

Accessories

Separate cooling

Axial fan, N-end

Fan motors with an axial fan are available for motor sizes 71–500 and can be ordered with variant code 183.

The fan motor types, and more detailed technical information can be found in the variant code description for code 183.

Fan on top, N-end

The non-axial fan available for motor sizes 280 and above is a Ziehl-Abbegg fan with an integrated motor. This cooling option is suited for 400 V, 50 Hz networks and can be ordered with variant code 422. More detailed technical data can be found in the variant code description for code 422.

Special motor and fan on top, N-end

A special ABB fan motor type is available for motor sizes 280 and above. It is suited for environments where IP 65 is the required IP class or where the input voltage must be other than 360–420 V (50 Hz).

The centrifugal impeller used in the fan is a Ziehl-Abegg impeller. This type of cooling can be ordered with variant code 514 and more detailed information can be found in the variant code description.

Accessories

Silencer for motor sizes 280–450

Both foot-mounted and flange-mounted motors can be fitted with a silencer to reduce noise level by about 5–6 dB(A). The silencer is painted blue and made of 2 mm steel sheet. The sound absorbing material is 40 mm thick polyurethane foam. On the rim there is a rubber strip for sealing on the floor. The silencer fits loosely over the motor.

The variant code for ordering a silencer is 055.

Motor size	AV	LV	LVT	DV	O ¹⁾	S ²⁾	Weight kg

Note: The dimensions are only valid for standard foot-mounted motors.

Accessories

Slide rails for motor sizes 160–250

1 Motor 2 Rail 3 Movable adjusting bolt 4 Fixing bolt, motor 5 Plate

A set of slide rails includes two complete rails with screws for mounting the motor on the rails. Screws for mounting the rails on the foundation are not included. Slide rails have unmachined lower surfaces and should, before tightening down, be supported in a suitable manner. Slide rails can be ordered with article numbers shown in the table.

ABB Access

With ABB Access, you can unlock all aspects of your drives, motors or PLCs, from one central location, the palm of your hand.

Simply scan the QR code on the ABB product to get started

ABB Access helps you easily find up-to-date product online data. It also provides easy access to documentation and manuals. If you happen to experience issues with your ABB product, this can be fastly and easily reported online to reach expert support from ABB.

- Device information – Easy Access to detailed product information and EcoDesign data
- Documentation – Quick Access to user manuals and step-by-step instructions
- Report issues – Fast Access to online issue reporting
- Contact – Access ABB contacts and search Channel partners

Motors and generators with a complete portfolio of services

IEC motors

- Low voltage motors
- High voltage induction and synchronous motors
- Marine motors
- Motors for explosive atmospheres
- Motors for food and beverage
- Motors for variable speed drives
- Permanent magnet motors
- Synchronous reluctance motors
- Traction motors

NEMA motors

- Low voltage motors
- High voltage induction and synchronous motors
- Marine motors
- Motors for explosive atmospheres
- Motors for variable speed drives
- Permanent magnet motors
- Servomotors
- Washdown motors

Generators

- Generators for wind turbines
- Generators for diesel and gas engine power plants
- Generators for steam and gas turbine power plants
- Generators for marine applications
- Generators for industrial applications
- Generators for traction applications
- Synchronous condensers for reactive power compensation

Life cycle services

ABB's portfolio of drives

Optimal solution for you

Being able to rely on the continuous high performance and efficiency of your operations is something you want to take for granted. ABB variable-frequency drives are made with all this in mind, established upon more than 40 years of experience and backed by a broad range of life cycle services.

ABB drives help you to optimize your processes and systems with state-of-the-art motor control technology, resulting in increased energy efficiency, better product quality, and reduced operating costs with higher output, less downtime, and reduced need for maintenance. All ABB drives are designed for easy selection, ordering, installation and use, and they offer integrated safety features, giving you more time to focus on what matters for you and your business.

Our portfolio offers low-voltage AC and DC drives, medium-voltage AC drives, and motion control drives spanning the fractional-kilowatt to multi-megawatt power level. There is a drive available for essentially every industry and application and for all types of motors, in environments ranging from

water utility facilities to clean electrical rooms, and to harsh coal mines and windy offshore platforms to food and beverage production. This wide product range allows you to select the best-fitting drive solution, providing maximum reliability and efficiency for every need.
